

Brand Guidelines

Logo Usage

The PAYVORA logo exists as a horizontal lockup (icon + wordmark), a standalone icon mark, and a vertical stacked lockup. Always use the supplied master files unmodified. Use the light-ink version on dark backgrounds and the dark-ink version on light backgrounds.

Incorrect Usage

Do not: redraw, trace, recreate, vectorize by approximation, redesign, modify proportions, crop, stretch, squash, rotate, add shadows, glows, gradients or bevels, sharpen, blur, smooth edges, replace fonts, substitute colors, move or remove elements, add padding, change corner radius, or alter spacing.

Safe Area

Maintain clear space around the logo equal to at least the height of the icon mark's 'P' stroke on all sides. Do not let text, imagery, or UI chrome enter this zone.

Minimum Size

Digital: do not display the horizontal lockup narrower than 120px wide, or the icon mark smaller than 24x24px. Print: do not print the lockup narrower than 1in, or the icon mark smaller than 0.25in.

Color Palette

Background (dark): #0A0A0F. Accent: #00D9A0. Logo ink: pure black #000000 or pure white #FFFFFF only - never recolor the mark itself.

Typography

Manrope (400, 500, 600, 700) is the brand typeface for all PAYVORA product and marketing surfaces.

Spacing Rules

Use consistent multiples of 8px for spacing around brand marks in digital layouts; use consistent multiples of 0.125in in print layouts.

Background Rules

Only place the logo on solid backgrounds: pure black, pure white, or the brand dark background (#0A0A0F). Never place it over busy photography, low-contrast colors, or gradients.

Asset Naming

Files are named <Component>-<Variant>-<Dimensions>.<ext>, e.g.

PAYVORA-Logomark-White-Transparent.png. Folder names match the categories in this brand package (Logos, App Icons, Favicons, Splash, Website, Social, Marketing, Motion, Email, Press Kit, App Store, UI Assets, Documentation).

Export Rules

Only resizing, format conversion, background placement, and platform icon-size generation are permitted on the logo artwork. Any format requiring true vector redrawing (true vector SVG paths, Safari mask-icon, Rive .riv) instead embeds the original raster losslessly, or is flagged in `Validation_Report.md` as not producible without redrawing.

Developer Notes

See replit.md's 'Dark fintech design system' note: the product's dark palette (#0A0A0F background, #00D9A0 accent) should match this brand package exactly. Favicon and app-icon exports in this package are ready to drop into artifacts/website/public and artifacts/mobile/assets respectively.
